

I Claim:

1. A pan for use with a commode, said pan having an upper generally rectangular rim having a front and a rear and having an opening therethrough, said rim having predetermined length and width dimensions, said length dimension being larger than said width dimension and extending from said front to said rear, said pan further having sides extending downwardly from said rim to form a bottom portion, said bottom portion being displaced rearwardly with respect to the midpoint of said length dimension.
2. A pan for use with a commode as defined in claim 1 wherein said bottom portion is generally circular.
3. A pan for use with a commode as defined in claim 1 wherein said bottom portion has an opening therein.
4. A pan for use with a commode as defined in claim 1 wherein said upper rim has an outwardly extending peripheral flange.
5. A commode for use with a person, said commode having a base frame and a commode seat affixed atop said base, said commode seat having a front, a rear and lateral sides and having an opening therethrough, and a pan affixed to said frame and located beneath said commode seat, said pan having an upper rim generally contiguous to said opening in said commode seat, said upper rim being generally rectangular with a predetermined length dimension and having an generally rectangular opening, said pan further having downwardly directed sides to form a bottom, said bottom being displaced rearwardly with respect to the midpoint of said predetermined length dimension.
6. A commode for use with a person as defined in Claim 5 wherein said opening in said commode seat is longer in the front to rear direction than said lateral side direction creating an elongated opening in the front to rear direction.

7. A commode for use with a person as defined in claim 5 wherein said bottom has a generally circular configuration.

8. A commode for use with a person as defined in claim 5 wherein said bottom has an opening.

9. A commode for use with a person as defined in claim 5 wherein said rim has an outwardly extending flange.

10. A commode for use with a person as defined in claim 9 wherein said pan is affixed to said frame by means of said peripheral flange resting upon said frame.

11. A commode for use with a person as defined in claim 9 wherein said frame includes a downwardly projecting L-shaped flange and said pan is affixed to said frame by being slidably interfitted atop said flange.
